

## SAVE KARACHI

# *National Conference on Environment*

### THEME

# WASTE MANAGEMENT CHALLENGES & OPPORTUNITIES

Pakistan is striving hard to protect its environment by planting billion trees, making dams & reservoirs, creating awareness to the masses about emissions, waste management, climate change and its overall impact. Being as an agricultural nation, the stakeholders creating opportunities for green and sustainable economy. Last year, we graciously hosted 'the World Environment Day' shown our great commitments towards cleaner and greener Pakistan.

Adequate handing of national municipal waste become 'Big Challenge' for the Government and Environmentalists. A recent study showed that country generates 50 million tons of solid waste per year, whereas the largest metropolitan city Karachi alone generates more than 16,500 tons waste each day. Future has great opportunities for national impact investors such as converting Waste-to-Energy (can generate upto 250MW) and installing Sustainable Treatment Plants; earn-and-reinvest revenue from this neglected arena. It would be a great potential market for the recycle products as well.

To discuss the ever-rising environmental challenges within and in the sub-continent region, the Team NFEH is pleased to organize an interactive national conference that will focus on theme: Waste Management Challenges & Opportunities; inviting the environmentalists, impact investors and donors, intellectuals to share their innovative thoughts and proven remedies based on research that can create positive impact on human lives, bio-diversity, agriculture and country's economic challenges. National and international Environmental Experts, Researchers and Scientists and Representatives of Donor Agencies and INGOs will deliver their presentations on burning topics.

Further, an Interactive Panel Discussion will be staged for the participants to get experts advises and exchanges views on various environmental issues and possible solutions to mitigate the disastrous effects of climate change in Pakistan.

This annual event will attract 200 participants and delegates from national and international Corporate Organizations, Industries, Governments, Academia and Media.

THEME  
**WASTE MANAGEMENT  
CHALLENGES & OPPORTUNITIES**

**OBJECTIVES**

Providing platform of interaction to participants and experts

Finding Solutions for Safe Disposal of waste

Billion Dollars opportunities for the sustainable cities

White Paper – Recommendations to the Policy Makers

**ABOUT THE ORGANIZER**

National Forum for Health & Environment (commonly known as "NFEH") is established on June 05, 1999 and registered under Voluntary Social Welfare Agencies Ordinance, 1961. NFEH is graciously affiliated with the United Nations Environmental Program (UNEP) since December 2005. We aim to facilitate, promote and help create environment, healthcare and educational awareness among masses. We have successfully organized multiple series of awareness programs with national and international Corporate Organizations, Industries, Govts and NGOs. The Team NFEH are actively participating in various activities including Tree Plantation, Beach Cleaning Activity, Mitigation of Marine and Air
