EXHIBITORS

The 7th edition of the Energy Storage Summit returned in-person to gather investors, developers, project leaders, storage solution providers, DNOs, aggregators, system integrators and software companies to discuss the latest opportunities within the industry and how accelerated deployment can be achieved.

This year we saw leading industry figures discuss the impact of increased capital and growth in the sector, with insights on disruptive technologies, expectations for supply, necessary policy change across the UK and Europe, as well as announcements of government funding.

With over 500 attendees and a sold out program in 2022, the 8th edition will be bigger than ever and with sponsors and attendees already getting onboard, you don't want to miss out in 2023.

Thank you to all speakers, sponsors, and attendees for contributing to the leading storage event of the year.

Rebecca Shacklady | Conference Producer

Key 2022 Themes

“ Lots of highly relevant panels and discussion. Great opportunity to catch-up with most relevant players from the storage industry”

Kilian Leykam, Investment Manager, Aquila Capital

The Future of Long Duration

As policy and regulation changes to allow longer duration storage options, we examine the need for these technologies and assess the bankability of these projects and where they fit into the market.

Colocation

We look at storage colocated with generation assets and evaluate what value batteries can add. Are colocated projects economically viable and what role does location play in this? How can we establish long-term revenue certain evidence for investors?

Financing

Join to understand how to improve investor confidence in your project – what makes a project attractive to investors? We will examine how you can ensure a well-funded pipeline as more investors look towards renewable energy and interest in energy storage grows.

Asset Management

As operational projects age, understanding the data becomes increasingly important. How can you ensure a robust Asset Management plan and are there lessons to be learnt from solar and wind projects?

What Is Next For Batteries?

With a market dominated by Lithium-ion, how are batteries evolving and can other technologies prove to be bankable? Does the market allow for these emerging technologies and what can be done to allow newer companies to compete?

Regulation

Interest in energy storage is increasing and as technology within the industry progresses, we examine whether policy is changing at the right pace to allow energy storage to reach its full potential. What updates have we seen in the past year and what still needs to be done across the UK and Europe to remove the barriers to large-scale deployment of storage.

Scaling up Storage

The storage industry has seen larger pipelines and larger capacity of storage projects and with this increased generation, we have seen DNOs increasing Active Network Management across networks. What does this potential curtailment mean for revenue and how do we manage grid congestion as demand for renewable energy and storage increases?

Securing the Supply Chain

In the wake of rising gas prices and global disruption, what challenges can we expect in ensuring stability across the supply chain. As demand for batteries increases, we unpack how to evaluate suppliers effectively and maintain confidence in achieving project deadlines. Where will your batteries come from, and will we see more localised supply in the future?

Looking Forward: Market Predictions

Uncertainty surrounding new technologies and risk appetite can make investing in and building new projects difficult. We will look at previous predictions and evaluate how the market actually performed and establish what businesses can expect from storage in the coming year.

Fire Safety

Mitigating against fire and physical risk is essential to ensuring the success of your project and as more cases of fires emerge, how can you establish a framework that prioritises safety. What does the future of fire safety look like in relation to batteries and what steps do you need to take?

“ An absolute must for anyone who is serious about investing into energy storage. Outstanding content and analysis in the presentations and panel discussions, invaluable networking opportunities during the breaks. The organisers provide everything one needs to utilise the full potential of the event, both in-person and online, from a dedicated conference app, to written materials, to proactive matchmaking”

Jan Libicek, Investment Director, Bluefield Partners

Key Sessions

“ I very much enjoyed the Energy Storage Summit, the panels and presentations were excellent with really insightful contributions from the speakers and members of the audience. It was an excellent use of time to immerse myself for two days in all of the different aspects of the battery storage business and learn from the leading experts in the market”
Conrad Purcell, Partner, Haynes Boone

What Kind of Market Design will Stimulate the Private Sector?

The State of GB Energy Storage in 2022: What Does the Data Tell Us?

Stability in Supply

Co-location: Opportunities for the Storage Industry

The Future of Long Duration

Lenders' Approach to Energy Storage

Regulatory Barriers Across Countries

Looking to the Next Big Storage Markets

“ A triumphant return of this valuable conference – surely the most important energy storage conference. A sell-out attendance and thoroughly engaged audience made this a very valuable event for anyone in the industry”

Mark Henderson, Chief Investment Officer, GRIDSERVE

“ The Summit was a great opportunity to meet today's storage value chain but also for a glimpse of what the future might look like, across technology, supply chain, policy and geographies. All in all, a conference that captures the energy of the growing storage sector”
Tom Harries, Partner, Nardac

"I found the event very positive and worthwhile. As well as getting the message out for long duration storage to a great crowd I was able to meet face to face with many of our clients and learn extensively about how the energy sector is evolving. I would highly recommend anyone who is looking to be involved in energy storage, to attend your events"

Mark Wilson, CEO, Ili Group

"It was fantastic to have the key players from the energy storage industry together again after the COVID-enforced hiatus. Our meetings scheduled around the event enabled us to catch up with a broad range of partners. The presentations and panel sessions facilitated topical discussions on a range of issues"

Richard Thwaites, CEO, Penso Power

"A great balance between content and networking. I estimate that about 80% - 90% of the key GB storage industry stakeholders were present, so a really superb opportunity to hear from and speak to so many of our clients and industry co-workers all in one place. A large number of the sessions were panels, allowing multiple viewpoints on a given topic. Now I just need to find the time to process all of the insights and leads we gained!"

Robin Redfern, Partner, Everoze
