HOST SPONSOR

#StorageSummit

22-23 March 2022 | Sheraton Austin Hotel at the Capitol, Austin, TX.

Post Show Report

Hello, I want to start by thanking all the speakers, sponsors, and attendees who made this year's Energy Storage Summit USA possible, and to all those who travelled to Austin to make the event such a success. With the challenges over the last couple of years in hosting live events, it was incredible to be able to welcome you all again in person – and the benefits of being able to network and discuss ideas face to face were clear.

Those two years have been a period of massive growth for energy storage, and that was clear to see from the diverse audience in attendance from right across the United States. A huge amount of ground was covered in this year's event, and it was encouraging to see the huge variety of organisations who are getting involved in storage.

Texas having had the grid challenges that it has made it an ideal location for this year's summit, and it was fascinating to see speakers join together from our opening panel to talk about how energy storage has been developing in the state, as well as a presentation by ERCOT later in the day. Key trends across the two days included long duration and supply chain issues. Green hydrogen and other alternative technologies was another trend that kept coming up, and is definitely one to watch in future.

Next year's Energy Storage Summit USA promises to be even bigger, and I am looking forward to seeing you there to share in your successes as the industry rolls out energy storage at an ever increasing rate.

George Turner | Senior Conference Producer

How Would You Describe the Summit to a Peer or a Colleague?

“Very helpful deep dive for someone new to the storage space”
Elizabeth Hiss, Brown Advisory

“Able to network with industry experts”
Connor Bentley, SunGrid

“It is a great opportunity to discover new information on the energy storage sector”
Kersey Reed, QIC

“Best Energy Storage only event”
Scott Perry, Greengate Power

“Great place to learn about Energy Storage and how it's best structured and meet the key players in the sector”
Fanny Lopez, North American Development Bank

“The summit facilitated genuine dialogue regarding the opportunities and challenges facing the energy storage industry”
Ricardo Rodriguez, Apex Clean Energy

“Key conference to meet finance and investment peers”
Christopher Melley, EnQuest

“Diverse attendees representing all major stakeholders”
Elizabeth Murphy, Utopus Insights

“Wide coverage of the BESS market situation. Interesting and detailed information covered”
Jorge Romero, Uriel Renewables, Inc

“The event to meet both solar and BESS developers and IPPs... opportunity to network with those interested in developing BESS in ERCOT”
Chris Casale, Fluence

“I could do a month of cold outreach or I could just this ONE customer-dense event and achieve the same marketing/sales goal”
Elias Hatem, inBalance

“A meeting of the "who's, who" of storage”
Aaron Oaks, BASF

“Large concentration of developers, IPPs, and investors”
Tom Thunell, Tyba

Key 2022 Themes

The evolution of the grid

As we transition towards a zero-emission electricity sector it will naturally require large scale storage in abundance. This poses the question how will a centrally-controlled resource accommodate for a growing storage market?

Finance

The age-old question is how do we make these projects bankable, and ultimately, how do we get project finance into the storage market? Join us as we listen from industry experts on the financial challenges facing storage projects.

Maximizing revenue opportunities

Battery deployment and storage have a range of revenue streams available to you. Understand the projects which are most bankable for you and provide the best ROI.

The unlocked potential of long-duration storage

The future of long-duration storage is here. How can we best maximize your revenue streams, and more importantly, assess the bankability of these projects and they fit into the market.

Looking towards the future, market forecasts

How do we predict an inevitably uncertain storage market? We will delve into previous forecasts and analysis of the storage market of the last ten years and see what the next ten holds for us.

Policy and regulatory environment

As the policy and legal framework naturally changes, how can firms, investors and manufacturers keep up to date with frequent policy shifts? Understand the direction and travel of policy and gain key insights from regulatory players.

Fire safety and risks

As we move towards long-duration storage the issue of fire safety and longevity naturally arises. How do battery developers, regulators and fire departments alleviate these problems and understand new technologies on the market?

Technology, innovation and automation

Lithium-ion and storage are often used synonymously. However, what is the future for other upcoming technologies, and are they a better fit for the industry? In this session we will understand the 'march of progress' towards nascent technologies and how asset owners can leverage them.

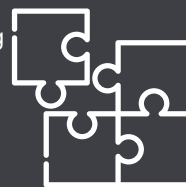

Asset management

As we transition to a carbon-zero planet and today's initiatives begin to age, how do we plan, manage and maintain grid and ancillary services? As the collection of data and information becomes the cornerstone of renewable management, understand how we can better manage the deployment of solar and wind projects.

Merchant models

With PPA's lifespan getting shorter and shorter, the solar market appears to be making a brisk turn to merchant modelling. As its popularity rises, we crucially need to understand to structure a merchant deal, and for lenders, how do we make it bankable?

Tackling the supply chain crisis

ESG has become the new buzzword in the industry as investors and developers attempt to source raw materials and goods from renewable sources. As more projects sit in the pipeline, understand how developers, investors and contractors source and evaluate their supply chains and maintain confidence in achieving project deadlines.

Grid Congestion and deployment

To understand the evolution of the grid we must look towards regulation to understand how regulators are making policy conducive to the grid. In this session we will look at investment in the grid and how developers are planning for the future in energy storage grows.

An Amazing Display of Content!

Here are some of the sessions that took place over the two day event and the contributing speakers.

Keynote Panel: Charging Ahead in the Texan Energy Market

As the storage market heats up, the Lone Star State is certainly on a march of progress with it forecast to have as much as 1,400MW of capacity as of September 2021. For all its progress, it has however encountered problems such as the absence of a capacity market, financing challenges in merchant deals and freak weather patterns leaving its storage market unprepared for the worst. This session will delve into these thorny issues and how other states can learn from their developments.

Karl Meeusen
Director – Markets,
Legislative and Regulatory
Policy
Wartsila

Warren Lasher
President
Lasher Consulting

Joel Turkheimer
VP of Market Operations
Key Capture Energy

Woody Rickerson
Vice President Grid
Planning and Operations
ERCOT

Luigi Ciavarella
VP of Energy Storage
RWE

Panel: Contracting and Financing Energy Storage Projects

The road to financing a project can sometimes be a murky journey, clouded in uncertainty. This session will provide in-depth analysis on the different contracts/financing solutions available for your project.

Alain Halimi
Executive Director,
Infrastructure and
Power Finance
Nomura

Dwayne Krpan
Director of Origination
East Point Energy

Andrew Chen
Managing Director
CIT Group Inc

Suleman Khan
CEO
Swell Energy

Saurabh Anand
Managing Director
Denham Capital
Management

Ted Sullivan
Senior Director
NTE Energy

Panel: Waves of Capital: Investor Appetite for Storage

Investors and lenders are particularly keen to enter the storage market. In 2021, the IEA reported that the US had already invested nearly \$2bn in battery storage deployment – making up a third of the world's total investment value.

Stephen Prince
President

How other states can replicate California and Texas' storage successes

By Cameron Murray

March 10, 2022

Americas, US & Canada Grid Scale Market Watch, Policy, Technology

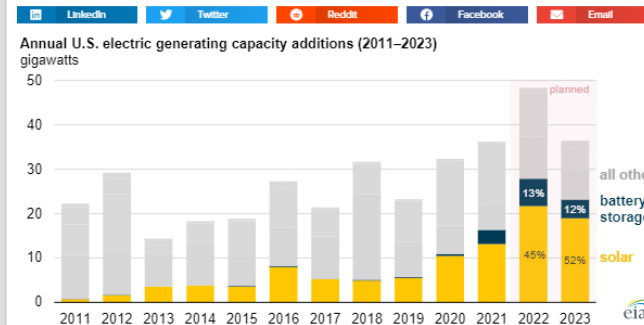

There is still plenty of educating decision-makers on storage's place on the grid to do to follow in the footsteps of early-movers like California and Texas, and it goes beyond

Majority of 10GW battery energy storage coming online in next two years in US paired with solar PV

By Andy Colthorpe

March 10, 2022

Americas, US & Canada Connected Technologies, Grid Scale Market Watch

Solar and battery storage dominate planned capacity additions through 2023, with another 10GW of battery storage. Image: US EIA.

From 10GW of battery storage expected to be deployed in the US over the next two years, more than 60% will be installed with solar PV, according to the US Energy Information Administration (EIA).

The EIA conducts surveys to collect statistics on existing and planned generators and associated equipment at power plants, of 1MW or more nameplate capacity. The independent group is an agency of

The three things the US needs to catch up with Europe's battery gigafactory charge

By Cameron Murray

March 9, 2022

Americas, Europe, US & Canada Connected Technologies Market Watch, Policy, Technology

With Europe set to reach 789.2GWh of lithium-ion battery gigafactory production by 2030 according to new Benchmark data, what does the US need to do to keep up as both race to prevent China completely monopolising the sector as it did with solar?

Panelists speaking on Day 1 of Lawrence Berkeley National Laboratory's (LBNL) National Energy Storage Summit yesterday (8 March) agreed that Europe is far ahead of its Atlantic neighbour on getting its gigafactory pipeline up and running – despite some recent forecasts pegging the two markets' 2030 expected capacity figures closely. So what needs to happen to make that pipeline a reality?

Creating a mindset that says it's possible

The good news is that the current US administration is bullish on getting there, said Robert H. Edwards, Jr. from the US Department of Energy's Loan Programs Office.
